## Medication Definitions

**Antidiabetic Agents:** Medications that help a person with diabetes to control glucose (sugar) in the blood. This includes insulin and oral (mouth) hypoglycemic agents (medications to lower blood sugar).

**Antihistamine Decongestants:** Medications used to treat allergies and colds. A decongestant is a medication that shrinks swollen tissues in the nose and makes it easier to breathe.

**Anti-Infective Agents (Oral):** Medications that treat bacterial infections.

**Antiviral Agents:** Medications that treat or control virus infections.

### **Autonomic & Central Nervous System Agents:**

Medications that treat disorders of the central nervous system (includes the brain and nerves in the spine) and the autonomic nervous system (includes nerves for motion and sensations such as touch and pain). This category includes pain medications; drugs for anxiety, depression and sleep; drugs for epilepsy and convulsions as well as Parkinson's disease.

**Cardiovascular Agents:** Medications used in the treatment of hypertension (high blood pressure) and heart conditions such as heart failure.

**Dermatologicals:** Medications used in the treatment of conditions that affect the skin.

**Gastrointestinal Agents:** Medications for the digestive system that control stomach acidity and reflux (heart burn) in the body, and improve flow of food through the gastrointestinal tract.

**Glucocorticoids:** Medications that have anti-inflammatory (reduces swelling) effects.

**Hormones:** Chemicals made in the body that help regulate body functions, including metabolism (the amount of energy your body burns to maintain itself), growth and reproduction.

**Ophthalmics:** Medications that treat various conditions of the eyes including infections and glaucoma.

**OTICS:** Medications used to treat various conditions of the ears.

### **Respiratory Asthma:**

- **Sympathomimetics:** Medications that relax muscles in the airways and increase air flow to the lungs.
- **Anti-Inflammatory—Corticosteroids:** Medications to stop the release of substances that cause inflammation (swelling) in the body.

### **Respiratory Asthma:**

- **Xanthine Derivatives:** Medications used to improve breathing by opening air passages in the lungs; used in the treatment of asthma, chronic bronchitis, and emphysema (a disease that causes shortness of breath).

**Skeletal Muscle Relaxants:** Medications that are used to relax certain muscles in order to relieve the stiffness, pain and discomfort caused by strains, sprains, or other muscle injuries.

**Thyroid & Antithyroid Agents:** Medications that work as a replacement for a hormone that helps with the body's energy and metabolism, normally produced by the thyroid gland. This medicine is taken when the thyroid does not produce enough of this hormone on its own.

## Definiciones de Medicamentos

**Agentes Antidiabéticos:** Medicamentos que ayudan a las personas con diabetes a controlar la glucosa (azúcar) en la sangre. Esto incluye la insulina y los agentes hipo-glicémicos tomado por la boca, (medicamentos para disminuir el azúcar en la sangre).

**Descongestionantes Antihistamínicos:** Medicamentos utilizados para tratar las alergias y los resfriados. Un descongestionante es un medicamento que reduce la hinchazón de los tejidos en la nariz y permite que sea más fácil respirar.

**Agentes Anti-Infecciosos (Orales):** Medicamentos que tratan las infecciones bacterianas.

**Agentes Antivirales:** Medicamentos que tratan o controlan las infecciones virales.

**Agentes Para el Sistema Autónomo y Sistema Nervioso Central:** Medicamentos que tratan los trastornos del sistema nervioso central (incluye el cerebro y los nervios de la espina dorsal) y del sistema nervioso autónomo (incluye los nervios de movimiento y de los sentidos como los del tacto y del dolor). Esta categoría incluye medicinas para el dolor; fármacos contra la ansiedad y depresión y los somníferos; medicamentos contra la epilepsia y las convulsiones así como para la enfermedad Parkinson.

**Agentes Cardiovasculares:** Medicamentos para el tratamiento de la hipertensión (alta presión arterial) y las afecciones cardíacas tales como la insuficiencia cardíaca.

**Dermatológico:** Medicamentos utilizados para tratar condiciones que afectan la piel.

**Agentes Gastrointestinales:** Medicamentos para el sistema digestivo que controlan la acidez y el reflujo estomacal (ardor de estomago) en el cuerpo, y mejoran el movimiento de alimentos por el tracto gastrointestinal.

**Glucocorticoides:** Medicamentos que tienen un efecto anti-inflamatorio (disminuyen la hinchazón).

**Hormonas:** Químicos producidos en el cuerpo que ayudan a regular las funciones corporales, incluyendo el metabolismo (la cantidad de energía que quema su cuerpo para mantenerse a sí mismo), el crecimiento y la reproducción.

**Oftálmicos:** Medicamentos que tratan varias afecciones de los ojos incluyendo las infecciones y el glaucoma.

**ÓTICOS:** Medicamentos que se utilizan en el tratamiento de varias afecciones de los oídos.

### **Asma Respiratorios:**

- **Simpaticomiméticos:** Medicamentos que relajan los músculos de las vías respiratorias y aumentan el flujo de aire los pulmones.

### **Asma Respiratorios:**

- **Anti-Inflamatorios—Corticosteroides:** Medicamentos que detienen la expulsión de sustancias que causan inflamación (hinchazón) en el cuerpo.
- **Derivados De Xantina:** Medicamentos que mejoran la respiración al abrir las vías aéreas en los pulmones; se utilizan en el tratamiento del asma, la bronquitis crónica, y la enfisema (una enfermedad que causa la falta de respiración).

**Relajantes Esqueletomusculares:** Medicamentos que se utilizan para relajar ciertos músculos para poder aliviar la rigidez, el dolor y la incomodidad ocasionada por los esguinces, las torceduras, y otras lesiones musculares.

**Agentes Para La Tiroides y Anti-Tiroides:** Medicamentos que funcionan como reemplazo de una hormona que ayuda con la energía y el metabolismo del cuerpo, la cual normalmente se produce en la glándula tiroidea. Esta medicina se toma cuando la tiroides no produce esta hormona en cantidad suficiente por sí sola.
